## Repository: mohamadassaf96/WIFI\_Jammer

### Repository Information

- Language: Python
- Stars: 4
- Description: Python application that jams WIFIs by sending deauth packets

### README Summary

## WIFI\_Jammer

---

### Description

The application jams all reachable access points and their clients. First, it continuously sniffs packets to find access points and catch their clients. Then, it impersonates each access point and sends both generic and client-targeted deauth packets.

The application is tested on Kali & Ubuntu Linux.

All the following commands must be run as root.

### What's Special

- Object oriented design
- Containerized plug-and-play application

# Disclaimer

As per...

## Analysis Results

### Entry Points

- src/run.py

### Core Modules

- src/deauth\_utils.py
- src/model.py
- src/sniff\_utils.py
- src/wifi\_utils.py

### Dependencies

### Architecture

- Type: CLI tool
- Confidence: 80%
